

Flag 0 – Return to Base

Mission

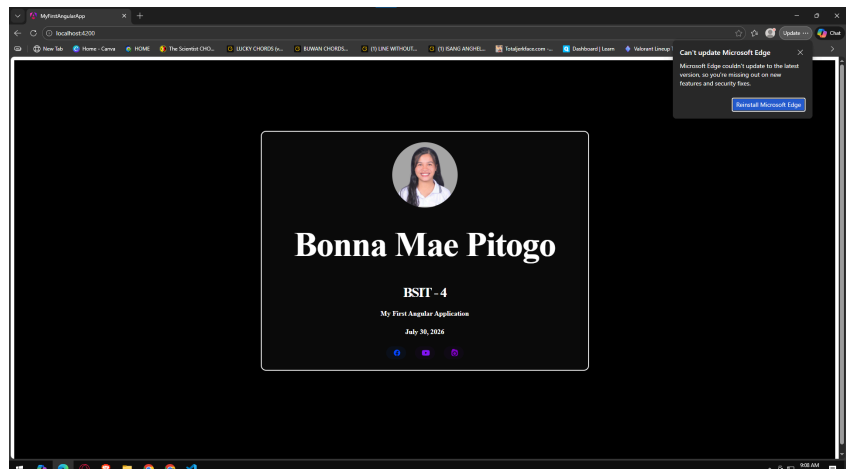

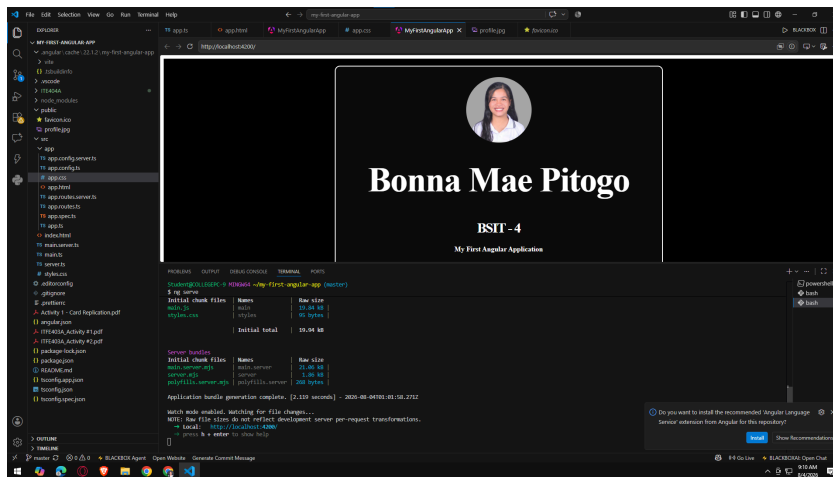

Open the Angular project you created during the previous activity.

Tasks

- Open **Visual Studio Code**.
- Open your Angular project folder.
- Open the integrated terminal.
- Verify that the project still runs.
- ng serve

Open:

<http://localhost:4200>

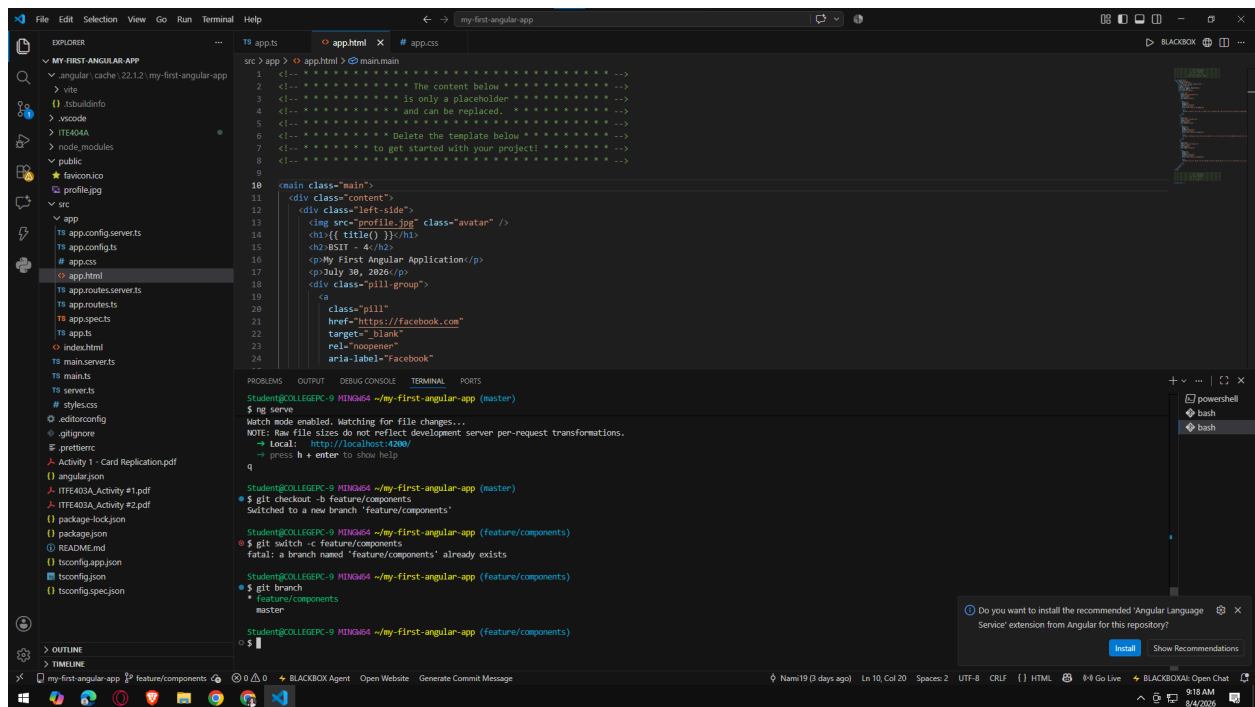

Flag 1 – Mission Branch

Mission

Every new feature must have its own Git branch.

Create a new branch named:

feature/components

The screenshot shows a Visual Studio Code editor window with a project named 'my-first-angular-app'. The Explorer panel on the left shows the file structure, including 'src/app/app.html'. The main editor area displays the content of 'app.html', which is a placeholder template for an Angular application. The Output panel at the bottom shows the terminal output of the following commands:

```
$ ng serve
Hatch mode enabled. Hatching for file changes...
NOTE: Raw file sizes do not reflect development server per-request transformations.
-> Local: http://localhost:4200/
-> press h + enter to show help

Student@COLLEGEPC-9 MINGW64 ~/my-first-angular-app (master)
$ git checkout -b feature/components
Switched to a new branch 'feature/components'

Student@COLLEGEPC-9 MINGW64 ~/my-first-angular-app (feature/components)
$ git switch -c feature/components
fatal: a branch named 'feature/components' already exists

Student@COLLEGEPC-9 MINGW64 ~/my-first-angular-app (feature/components)
$ git branch
* feature/components
master
```

A notification dialog in the bottom right corner asks: "Do you want to install the recommended 'Angular Language Service' extension from Angular for this repository?" with an "Install" button and a "Show Recommendations" link.

Flag 2 – Explore the Base

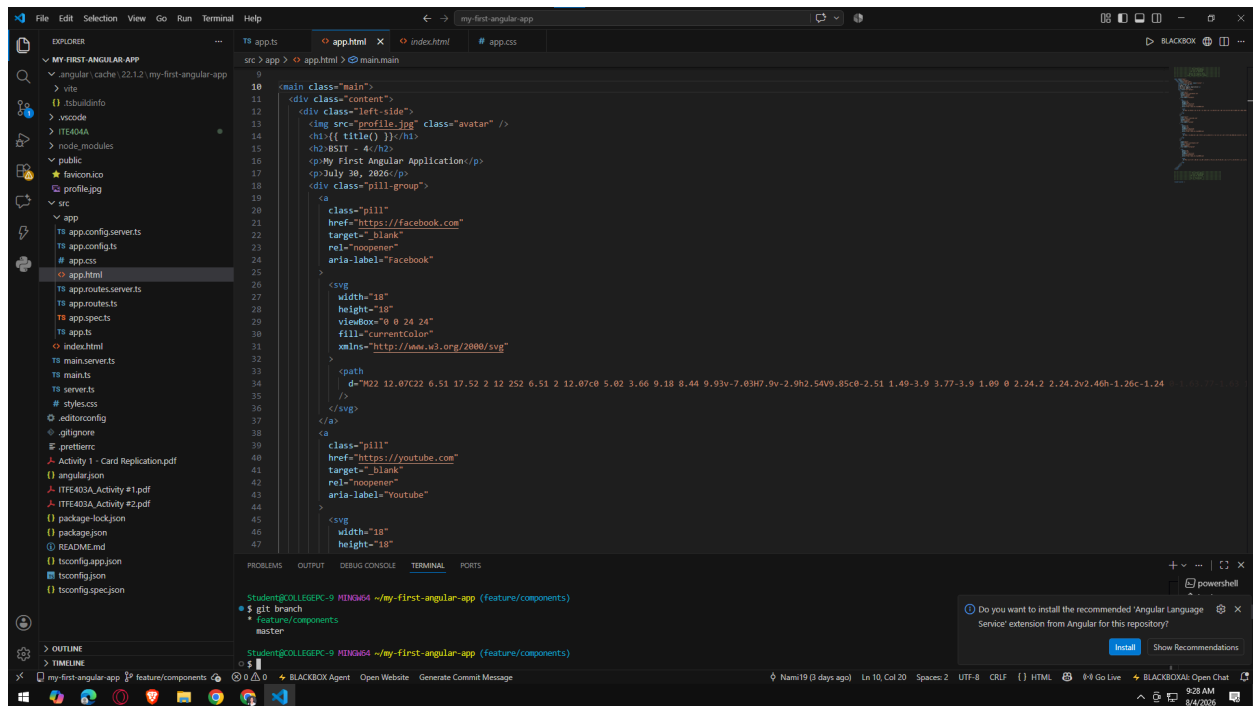

Mission

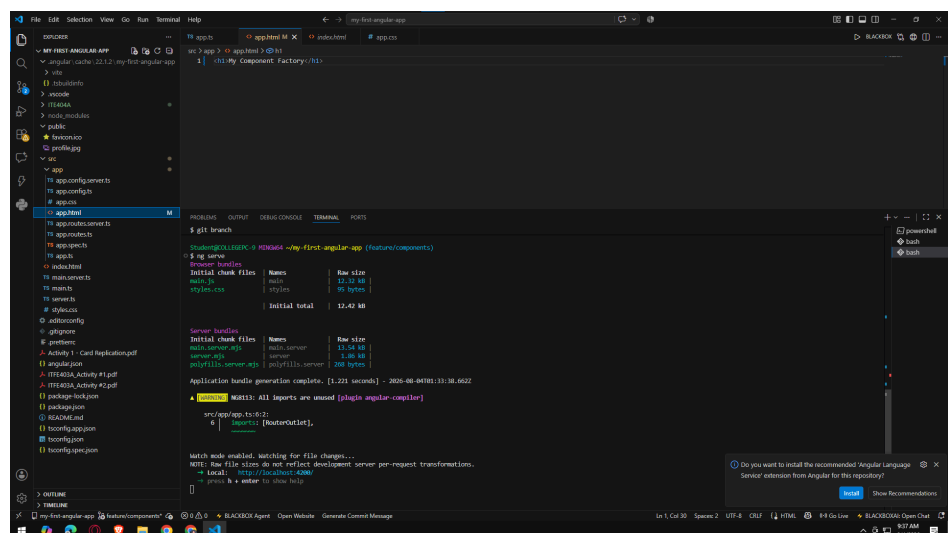

Investigate your Angular project before making changes.

Locate the following:

- app.html
- app.ts
- app.css
- app.spec.ts

Understand that these files belong to the **App Component**, the root component of the application.

Flag 4 – Build the Headquarters

Mission

Create a reusable Header component.

Generate:

ng generate component components/header

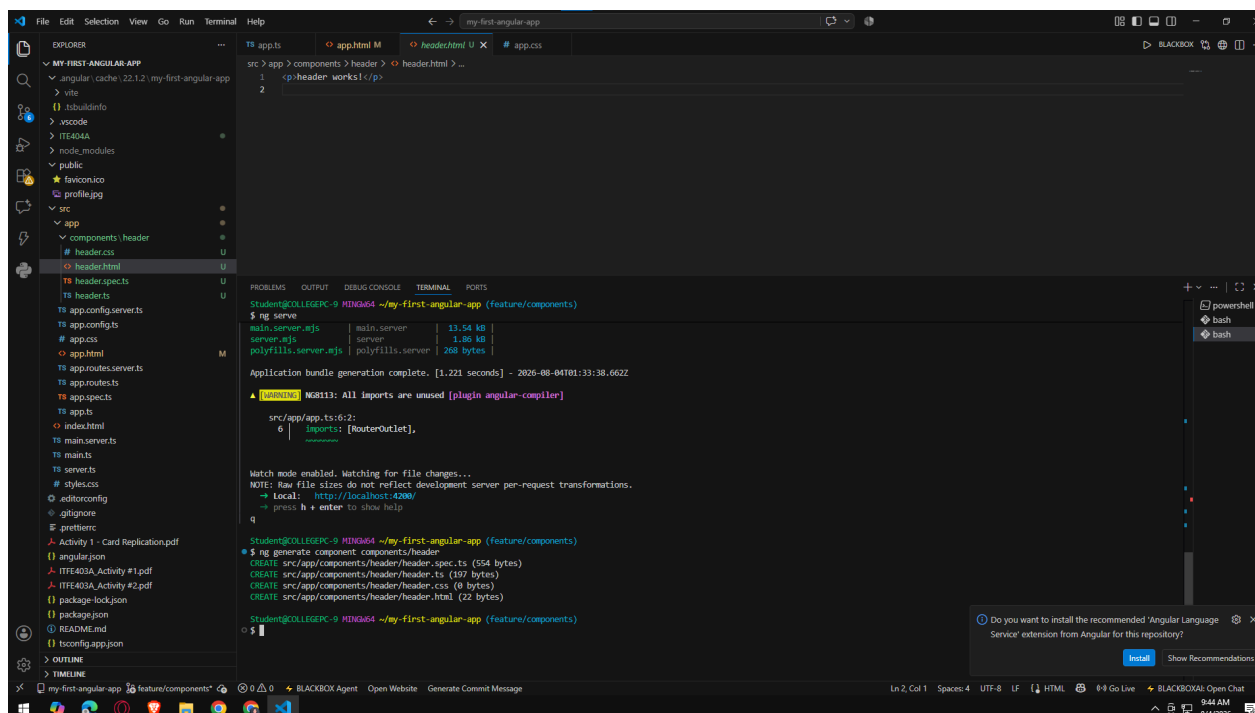

Angular should automatically generate:

header.ts

header.html

header.css

header.spec.ts

Flag 5 – Raise the Banner

Mission

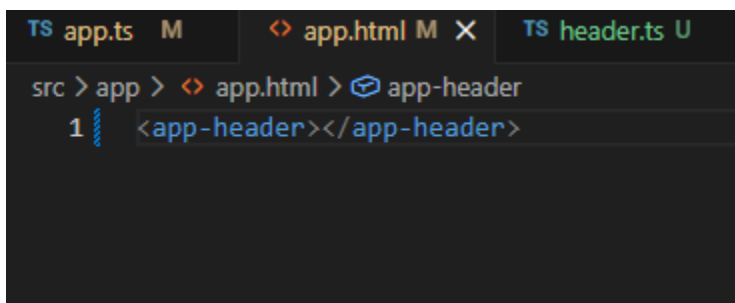

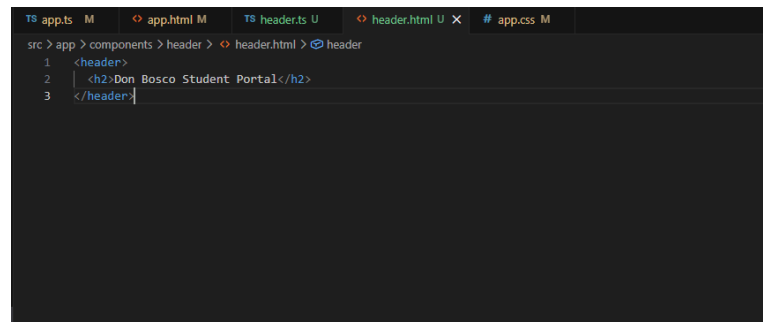

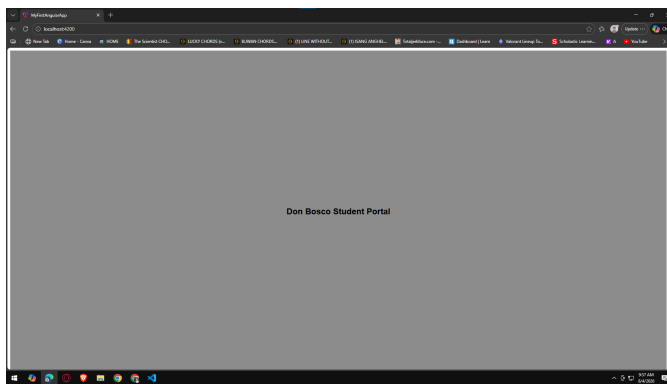

Inside the Header component, create a simple header.

Example:

```
<header>
  <h2>Don Bosco Student Portal</h2>
</header>
```

Use the component inside:

```
app.html
<app-header></app-header>
```

Flag 6 – Secure the Exit

Mission

Create a Footer component.

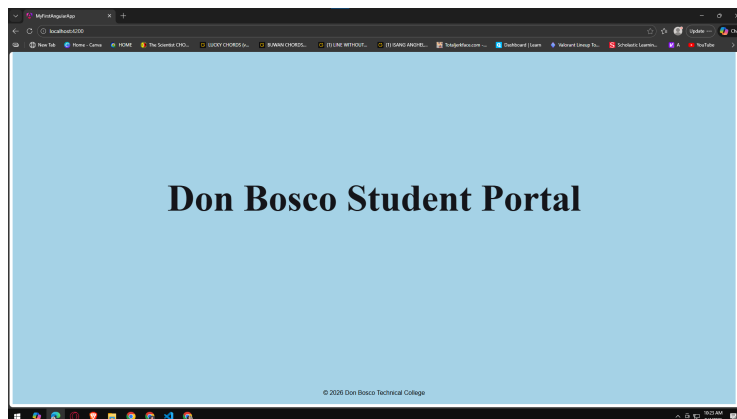

Use the same command previously, but now for the footer.

Display:

`<footer>`

© 2026 Don Bosco Technical College

`</footer>`

```
TS app.ts M TS footer.ts U X app.html M footer.html U T
src > app > footer > TS footer.ts > Footer
1 import { Component } from '@angular/core';
2
3 @Component({
4   selector: 'app-footer',
5   standalone: true,           // <-- Add this
6   imports: [],
7   templateUrl: './footer.html',
8   styleUrls: ['./footer.css'],
9 })
10 export class Footer {}
```

```
TS app.ts M TS footer.ts U app.html M footer.html U X T
src > app > footer > footer.html > footer
1 <footer>
2   &copy; 2026 Don Bosco Technical College
3 </footer>
```

Flag 7 – Create the Profile Card

Mission

Generate a reusable Profile Card.

Use the command to create a new component called profile-card.

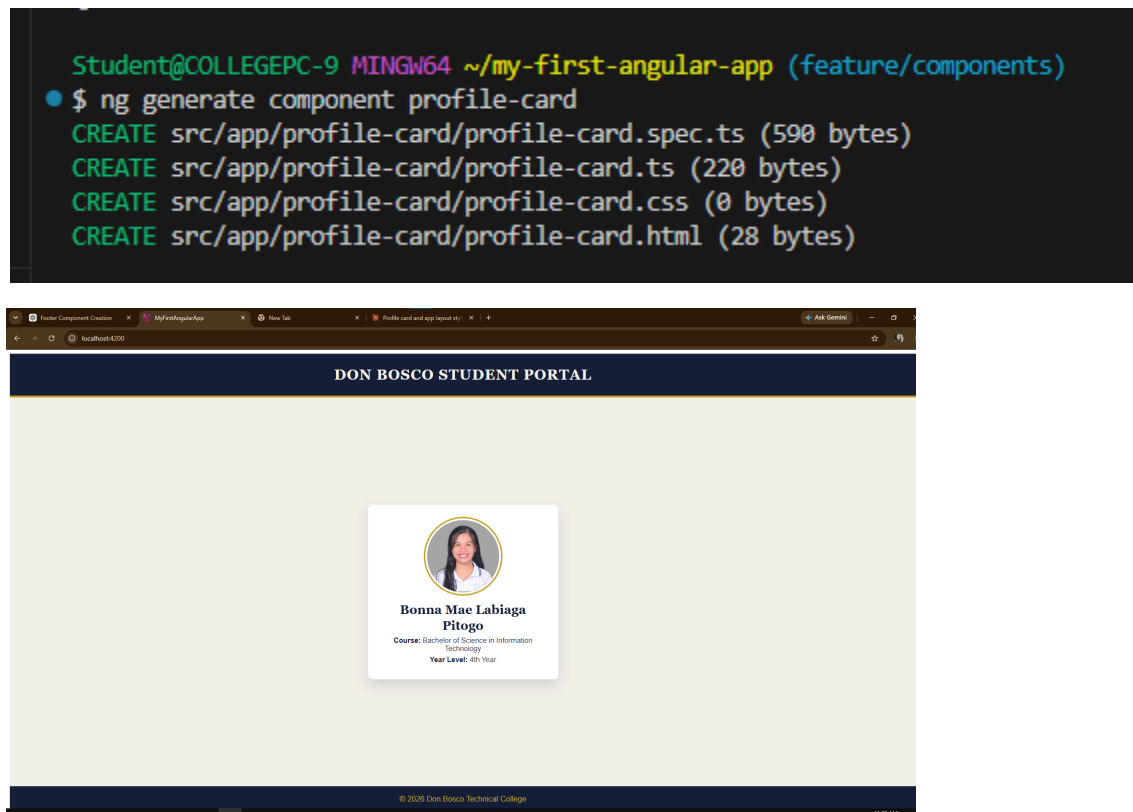

Create a card containing:

- Profile Picture
- Name
- Course
- Year Level

(Design is optional)

Insert it into:

App.html

Flag 8 – Produce Announcement Cards

Mission

Generate one reusable Announcement Card.

Use the same command, creating the component announcement-card.

Design a card containing:

- Announcement Title
- Description
- Date

Do **NOT** create three separate components.

Instead, reuse the same component.

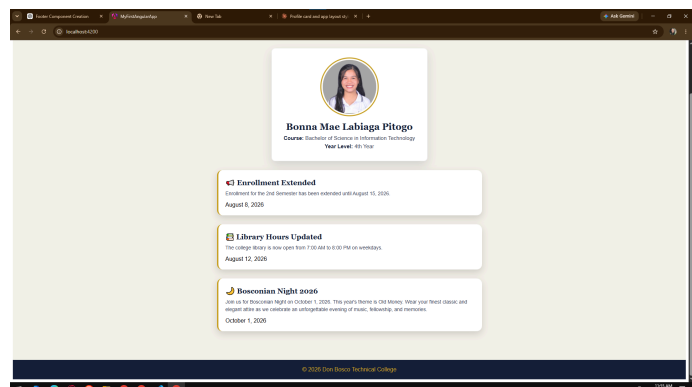

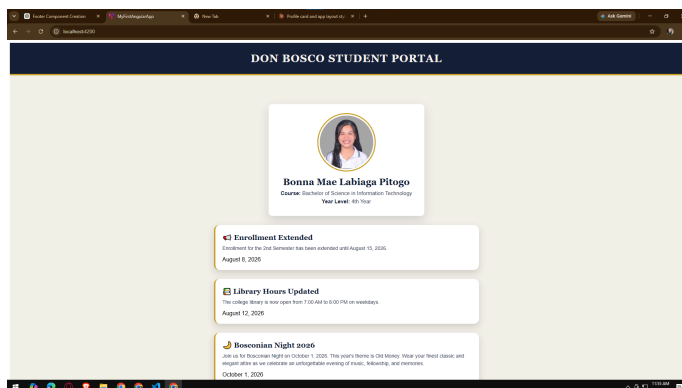

Example:

```
<app-announcement-card></app-announcement-card>
```

```
<app-announcement-card></app-announcement-card>
```

```
<app-announcement-card></app-announcement-card>
```

```
Student@COLLEGEPC-9 MINGW64 ~/my-first-angular-app (feature/components)
● $ ng generate component announcement-card
CREATE src/app/announcement-card/announcement-card.spec.ts (625 bytes)
CREATE src/app/announcement-card/announcement-card.ts (240 bytes)
CREATE src/app/announcement-card/announcement-card.css (0 bytes)
CREATE src/app/announcement-card/announcement-card.html (33 bytes)
```

Flag 9 – Assemble the Dashboard

Your `app.html` should now act only as the page assembler.

Assemble your page to have this structure:

header

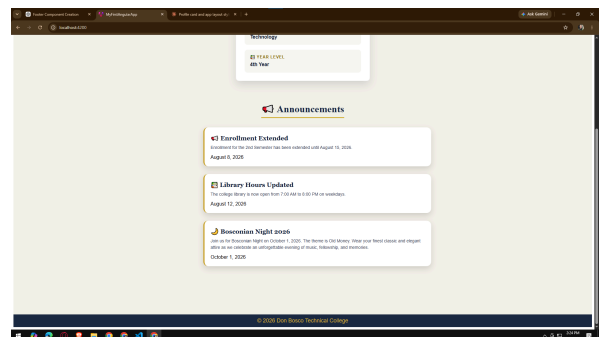

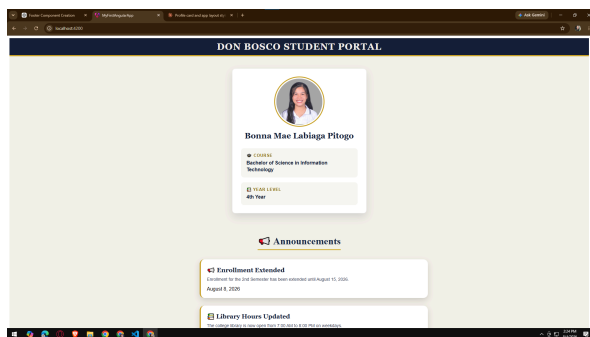

profile-card

announcement-card

announcement-card

announcement-card

Footer

```
src > app > app.html > main.dashboard > app-announcement-card
1 <app-header></app-header>
2
3 <main class="dashboard">
4
5 <app-profile-card></app-profile-card>
6
7 <h2 class="announcement-title"> Announcements</h2>
8
9 <app-announcement-card
10 [title]="Enrollment Extended"
11 [description]="Enrollment for the 2nd Semester has been extended until August 15, 2026."
12 [date]="August 8, 2026">
13 </app-announcement-card>
14
15 <app-announcement-card
16 [title]="Library Hours Updated"
17 [description]="The college library is now open from 7:00 AM to 8:00 PM on weekdays."
18 [date]="August 12, 2026">
19 </app-announcement-card>
20
21 <app-announcement-card
22 [title]="Bosconian Night 2026"
23 [description]="Join us for Bosconian Night on October 1, 2026. The theme is Old Money. Wear your finest classic and elegant attire as we celebrate an unforgettable evening of music, dancing, and socializing."
24 [date]="October 1, 2026">
25 </app-announcement-card>
26
27 </main>
28
29 <app-footer></app-footer>
```

Flag 10 – Client Changed Their Mind

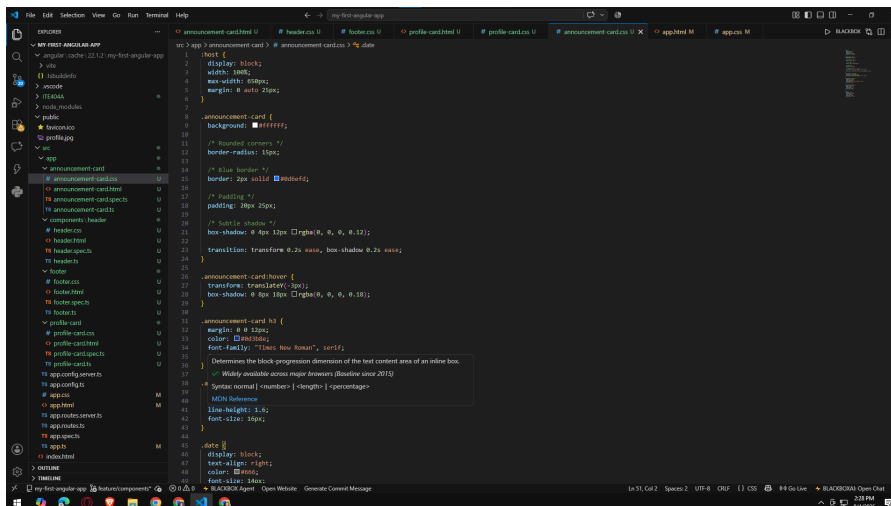

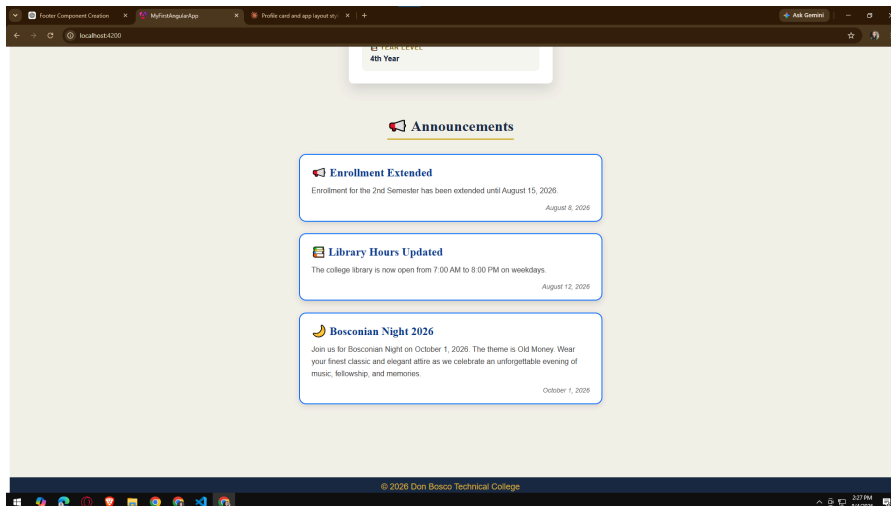

Mission

The client sends an urgent request:

"Every announcement card should now have:

- Rounded corners
- A blue border
- Padding
- A subtle shadow"

You must update **only one file**.

Flag 11 – Pushing Changes

Commit your completed work, then push to your repository.
